

Vincent Penasse – 24 September 2019

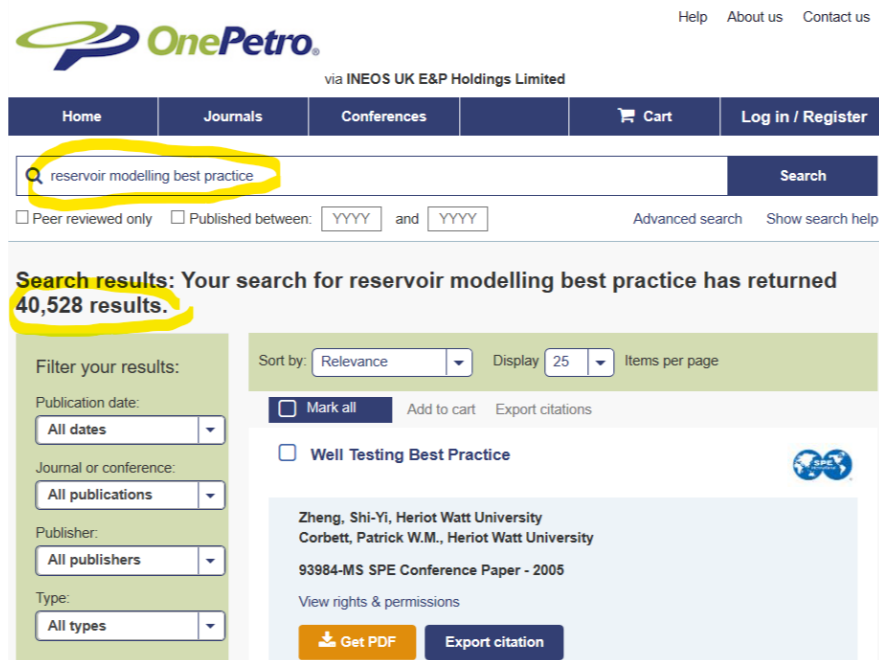

YP /SP* EVENING EVENT

Current situation

- A lot of knowledge and skills are getting lost with each person moving out to **retirement** → **risk of skill gap**.

- A lot of knowledge and skills are getting lost with each person moving out to **retirement** → **risk of skill gap**.
- Age of **over information**: too much, mix of useful and not useful, and only a fraction is remembered.
Perishable information.

The screenshot shows the OnePetro website interface. At the top, there is a navigation bar with links for Home, Journals, Conferences, Cart, and Log in / Register. Below this is a search bar containing the text "reservoir modelling best practice". To the right of the search bar are links for Help, About us, and Contact us. Below the search bar, there are filters for "Peer reviewed only" and "Published between: YYYY and YYYY". The search results section displays "Search results: Your search for reservoir modelling best practice has returned 40,528 results." On the left side, there is a "Filter your results:" section with dropdown menus for "Publication date" (All dates), "Journal or conference" (All publications), "Publisher" (All publishers), and "Type" (All types). On the right side, there is a "Sort by:" dropdown (Relevance), a "Display" dropdown (25), and a link for "Items per page". Below this, there is a "Mark all" button and links for "Add to cart" and "Export citations". The first search result is titled "Well Testing Best Practice" and is authored by Zheng, Shi-Yi, Heriot Watt University and Corbett, Patrick W.M., Heriot Watt University. It is identified as "93984-MS SPE Conference Paper - 2005". Below the title, there is a link for "View rights & permissions" and two buttons: "Get PDF" and "Export citation".

- A lot of knowledge and skills are getting lost with each person moving out to **retirement** → **risk of skill gap**.
- Age of **over information**: too much, mix of useful and not useful, and only a fraction is remembered. Perishable information.
- **Collaboration** at SPE and other professional associations: conferences, journals, SPE connect, webinars, workshops, e-mentoring. A lot of good work is done. **Could we do better?**

Some guiding “principles”

- **Experiment new ways of collaboration**
- Collaboration between YP and SP's
- Focus on **best practices and lessons learned that matter to SPE London**

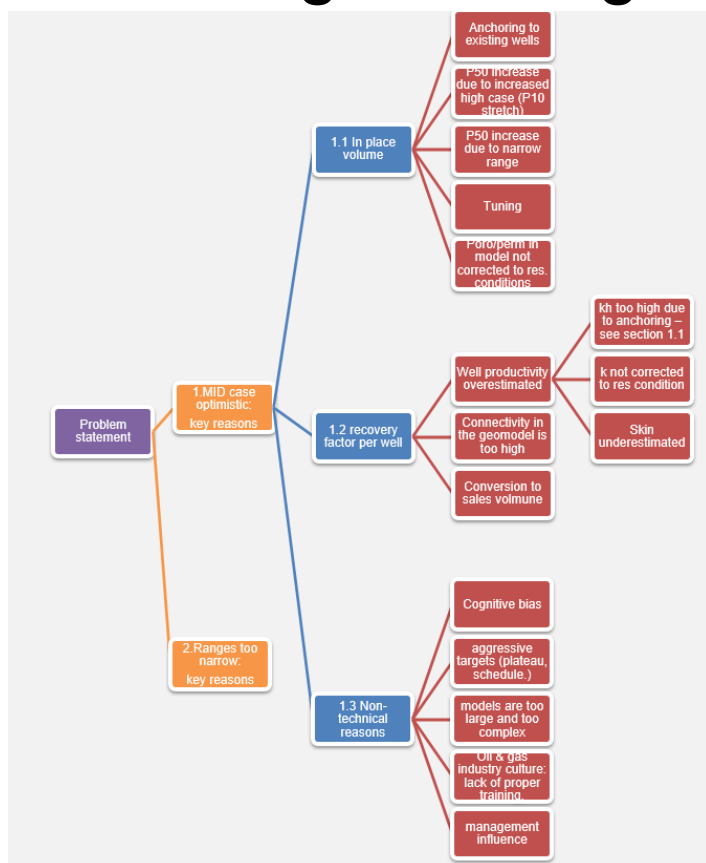

- **a new collaboration model based on an e-library + learning groups** (or focus group):
 - A group of people decide to start a learnings group on a topic that matters to them. Ideally, need a diverse group of seniors and young professionals. —> we have pre-selected 5 topics base on a member survey in Q2 of 2019
 - Modelling and its pitfalls
 - Career progression
 - Business deals and asset valuation
 - Soft skills
 - Social networks and e-networking

- a new collaboration model based on an e-library + learning groups (or focus group)
 - A group of people decide to start a learnings group on a topic that matters to them. Ideally, need a diverse group of seniors and young professionals. —> we have pre-selected 5 topics base on a member survey in Q2 of 2019
 - **Filtering of information**, finding the “good stuff” that is buried with the ‘bad’ stuff. **The “good stuff” ends into a note which is then shared online (e-library).** The group meets once or up to maybe up to 5 times to mature the note.

- Example of note: mind map on reservoir modelling challenges*

1. Note created in 2016-2017 through a collaborative and iterative approach within Ineos.

- a new collaboration model based on an e-library + learning groups (or focus group)
 - A group of people decide to start a learnings group on a topic that matters to them. Ideally, need a diverse group of seniors and young professionals. —> we have pre-selected 5 topics base on a member survey in Q2 of 2019
 - Filtering of information, finding the “good stuff” that is buried with the ‘bad’ stuff. The “good stuff” ends into a note which is then shared online. The group meets once or up to maybe up to 5 times to mature the note.
 - **The note is shared online (e-library).** A group of 1-2 volunteers maintains and mature the note over time, based on new information and new feedback from other users (“wikipedia” **concept**).

5.30pm: Introduction & Form teams

30' Welcome address

30' Form up to 12 groups of 4 and start group discussions

6.30 pm: DRINKS AND NETWORKING BUFFET

7.00 pm: Team Group discussions and presentations

45 min Group work

15' Groups finalise the note and save it on SPEconnect

60' Presentation of notes, feedback about the event

9.00pm: End

- Guideline for group work
 - Senior professionals: brings own experience while making sure other understand (no jargon)
 - YP: come with questions + write up the note
 - Stop your train if someone is left behind! This is not a competition...
- Life is short: enjoy while doing something that matters.

- Don't expect this to be easy but just do your best!

Career Progression

Res modelling pitfalls

Soft skills

Soft skills are grouped into three areas, according to SPE competency tool *:

1. Leadership
2. Communication
3. Problem solving

During the event, the work group focussed on the topic of communication and collaboration

*<https://www.spe.org/en/training/cmt/>

3 key actions to improve collaboration

1. Make sure that there is a clear group of people and a clear goal
2. Build and maintain models
3. Build your "collaboration" mindset - Attitude / Behaviour either being a bad behaviour, dominant behaviour, forceful behaviour within a group and so on be more respectful).

1 - a clear group of people and a clear goal

- who do you want to collaborate with?
- Is the desire to collaborate shared? Are mutual benefits clear?
- What do you want to achieve and is your goal SMART ?

Need to review the goals regularly with the team. Some people need regular, face to face communication.

2- Adopt, Build and maintain models:

- Model is meant as a shared mental model as described by Harari in his book Sapiens, not necessarily as a numerical model.
- Examples of models
- Oil and gas integrated asset model
- Mind map, argument map
- team process model, team workflow model, project Gantt chart. Scrum project management model.
- project risk register
-

Models needs to be:

- simple enough to be understood by everyone in the team (cf quote from Einstein about models). For example the scrum model is 8 steps, 4 roles and 4 meetings over a sprint of 2 weeks.
- actively compared to reality and maintained (recalibrated) with new information
- reason for using the model is clear for everyone (model purpose). When the purpose of a geological model is to make a production forecast, a good practice is to include the economist at very early stage, so that geoscience staff understand project requirements and deadlines.
- Not perfect: it is better to start with a rough model. And refine the model iteratively, only if necessary. For instance make a production forecast with a simple material balance model along with knowledge of analogue field performance can be sometimes good enough for a production forecast.

3 Adopt a "collaboration" mindset

- be realistic but positive: collaboration between two can bring poorer results than the sum of the two... if done poorly. But the opposite is true. We can be much, much stronger together.
- willingness to succeed together. We wish other people's success. We trust the rest of the team and they trust me.
- curiosity about what other people are doing in the project, and what is special about their knowledge.
- Feedback and continuous improvement culture.
- Conflicts are OK and healthy for the group.
- Share what you do not know.
- Management and team leaders are the ones setting the tone of the interactions. They need to be aware that their behaviour is used as a "benchmark".
-

- Please address further feedback to Vincent.Penasse@ineos.com
- 1. Good event set up, allowing relaxed atmosphere. People are comfortable to share their knowledge and also to ask questions
- 2. A Senior professional realised that the business world has changed a lot, that recruiters are requiring excellent “soft skills” from young professionals, as long as being excellent technical people.
- 3. Small group set up was very good, people feel that it is OK to ask questions.
- 4. A young professional was very happy to get to know the M&A process as he never had the chance to have this experience yet.
- 5. Great set up to share information – many workshop show “sanitised” presentation where everything is perfect, where only good stories are told.
- 6. Broad topics, broad knowledge (?) in a single event
- 7. Two Senior professionals felt that they offered more knowledge than received from young professionals.

- Implement SPE London e-library (ie post notes on SPE connect, in relevant groups)
- Organise follow up event
